Real Party In Interest

The real party in interest in this appeal is MIDWEST PAYMENT SYSTEMS, an Ohio corporation of having a place of business at 38 Fountain Square Plaza, Cincinnati, Ohio 45263.

Related Appeals and Interferences

There are no such appeals or interferences.

Status of Claims**Total Number of Claims in the Application**

Claims in the application are 25-58.

Status of all the Claims

1. Claims cancelled: 1-24
2. Claims withdrawn from consideration but not cancelled: NONE
3. Claims objected to: NONE
4. Claims allowed or confirmed: NONE
5. Claims rejected: 25-58

Claims on Appeal

The claims on appeal are Claims 25-58.

Status of Amendments

There are no amendments pending.

Summary of Claimed Subject Matter as to Independent Claim 25

Independent Claim 25 is described in the specification on page 38, lines 3-18 and Fig. 3, reference numbers 112, 120 and 150, and on page 49, line 11 through page 50, line 2, and Fig. 7 of the drawings.

As recited in claim 25, a bill paying system stores information for payees, and payors, including parameters established for enabling transfers of funds from a payee to a payor by a funds transfer generator. A communication device receives bill data from a plurality of payees and causes an interactive device to present the plurality of transactions representing bills of at least two different payees.

Summary of Claimed Subject Matter as to Independent Claim 42

Independent Claim 42 is described in the specification on page 38, lines 3-18 and Fig. 3, reference numbers 112, 120 and 150, and on page 49, line 11 through page 50, line 2, and Fig. 7 of the drawings.

As recited in claim 42, a bill paying method involves storing information for payees, and payors, including parameters established for enabling transfers of funds from a payee to a payor by a funds transfer. Funds transfers are generated based on bill data, and the stored information. The bill data from a plurality of payees is received and is presented on an interactive device.

Grounds of Rejection

Claims 25-38, 40-55, 57 and 58 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Kight, U.S. Patent No. 5,383,113, in view of Pickering, U.S. Patent No. 5,483,445, as cited in the Final Office Action.

Argument

Applicant submits that the Examiner has failed to present a prima facie case of obviousness of the rejected claims based on the cited Kight and Pickering references.

Furthermore, Applicant submits that the Examiner has improperly applied the standard of obviousness in asserting the combination of the cited Kight and Pickering references.

Applicant has argued based on upon the independent claims which stand or fall with the dependent claims for the purposes of this appeal.

Argument - Rejections under 35 U.S.C. § 103

Claims 25-38, 40-55, 57 and 58 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Kight, U.S. Patent No. 5,383,113, in view of Pickering, U.S. Patent No. 5,483,445, as cited in the Office Action.

Kight discloses a system, developed by Checkfree Corporation, in which "a consumer may instruct a service provider by telephone, computer terminal, or other telecommunications means to pay various bills without the consumer having to write a check for each bill." (Abstract) There is no disclosure in Kight of the consolidation of multiple bills for combined presentation, nor is there disclosure of an interactive device for presenting bills of multiple potential payees. Rather, the flow of information is not from the biller to the Kight system and then to the payor for authorization or review, but rather, from the biller to the payor, and then to the Kight system for initiation of the payment transfer. Note col. 1, line 66 et seq.: "The method of the present invention includes ... the generation of payment instructions by the consumer at a convenient location, typically remote from the payment service provider (e.g., at home), through an input

terminal such as a personal computer, a push-button telephone or other like communication means ... validating each transaction against a dynamic credit file and routing based on set parameters....” Kight is thus a service provider for the actual routing of payment – not a service provider for bill collection. Kight does not in any way suggest collecting bill data from billers for presentation in combination to a payor.

Pickering is a filing made by American Express relating to a “method of consolidating a plurality of individual company charges for a customer...” (Abstract) In this method, a paper statement (see Pickering Fig. 7) is sent to the consumer, listing the payments due. A combined payment and a combined due date is identified (see 77 and 81). The Pickering patent notes that companies may be paid after the due date and would need to be paid a compensatory “float” payment in such cases (col. 10 lines 3-5. However, “it is preferable to determine or calculate the single periodic customer billing date for the company and utility charges that are incurred by the customer in order to minimize the overall compensatory payment or “float” payment rebated to the group of companies and utilities.” (col. 10, lines 30-34 However, it is also possible for the “float” to be paid to the financial firm operating the system, as noted in col. 11 at lines 8-10.

The Examiner seeks to combine Kight and Pickering to achieve the claimed invention. However, this combination fails for at least two reasons.

First, the Examiner does not explain how he would find in either reference a system or method that would undertake the step of “causing an interactive device to present a plurality of transactions representing bills of at least two different payees”, as recited in the claims. Kight lacks any suggestion of presenting bills of multiple billers on an interactive device and Pickering

uses paper to interact with a payor. Lacking these elements the Examiner does not have a prima facie case of obviousness.

Furthermore, the Examiner fails to explain why a person of skill would take the initial step of combining Kight and Pickering, a step that is required for an obviousness analysis.

As noted in Applicant's prior submissions, there is a fundamental incompatibility between Kight and Pickering that belies the Examiner's view that these references would be combined, in any fashion.

Specifically, all payment methods described within the Checkfree/Kight system are
